Table of contents I

1 System Information

2 Installed Packages

Section 1

System Information

User & Environment

```
# System user name
```

```
Sys.info()[c("user", "nodename")]
```

```
           user           nodename  
"weihuachen" "Weihuas-MBP25.local"
```

```
# Operating system / platform
```

```
Sys.info()["sysname"]
```

```
sysname  
"Darwin"
```

```
# R version
```

```
R.version.string
```

```
[1] "R version 4.5.0 (2025-04-11)"
```

```
# Platform string (architecture + OS)
```

```
R.version$platform
```

Working Directory

```
# Current working directory  
getwd()
```

```
[1] "/Users/weihuachen/workspace/" /06 - /061 - /062- / - R for bio
```

Section 2

Installed Packages

Packages by Library Path

```
# All installed packages, grouped by library path
pkgs <- installed.packages()
pkgs_df <- as.data.frame(pkgs[, c("Package", "Version", "LibPath")],
                        stringsAsFactors = FALSE)

# Show the distinct library paths
cat("Library paths in use:\n")
```

Library paths in use:

```
print(unique(pkgs_df$LibPath))
```

```
[1] "/Library/Frameworks/R.framework/Versions/4.5-arm64/Resources/library"
```

Packages in Default Library

```
# Default library (.libPaths()[1]) - usually where install.packages() puts
default_lib <- .libPaths()[1]
cat("Default library:", default_lib, "\n\n")
```

Default library: /Library/Frameworks/R.framework/Versions/4.5-arm64/Resources

```
default_pkgs <- pkgs_df[pkgs_df$LibPath == default_lib, ]
cat(sprintf("Number of packages: %d\n", nrow(default_pkgs)))
```

Number of packages: 623

```
print(default_pkgs)
```

	Package	Version
abind	abind	1.4-8
ade4	ade4	1.7-24
admisc	admisc	0.40
airway	airway	1.28.0
AmesHousing	AmesHousing	0.0.4

Package Count Summary by Library Path

```
# Summary table: how many packages live in each library  
lib_summary <- table(pkgs_df$LibPath)  
print(lib_summary)
```

```
/Library/Frameworks/R.framework/Versions/4.5-arm64/Resources/library  
623
```

All Libraries, cont.

```
# Show any remaining packages in other library paths
other_libs <- setdiff(unique(pkgs_df$LibPath), default_lib)
if (length(other_libs) > 0) {
  for (lib in other_libs) {
    cat("\nLibrary:", lib, "\n")
    print(pkgs_df[pkgs_df$LibPath == lib, c("Package", "Version")])
  }
} else {
  cat("No packages in other library paths.\n")
}
```

No packages in other library paths.
